HOME OF THE "CHELTEN SPECIALTIES," PHILADELPHIA

FOREWORD

In the following pages we have endeavored to describe clearly, without superfluous wording, the principal house-wiring specialties manufactured and supplied by us.

Our facilities are exceptional for the production of superior material, which, combined with close attention to details, insure to our patrons satisfactory goods and prompt shipment.

Too little attention is given the big factor of *quality* in buying. There are almost as many grades of quality as Switches, and the tendency to regard price only is altogether wrong. In rare cases our prices may be a trifle higher, but the difference in quality, when considered, far over-balances the difference in prices.

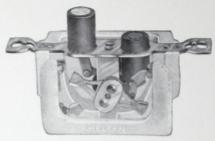

CHELTEN ELECTRIC CO.

91-B2756 TCF

"CHELTEN" SHALLOW PUSH BUTTON SWITCHES

CAT. No. 4000 PAT. MAY 7, 1912

The "Chelten" Shallow Push Button Switch, like our other specialties, is the result of a number of years' experience in the line of switch manufacture; by those who have been with the industry since its infancy. It is not a side line with us, it is our whole business. We have studied every detail, and have spared neither time nor expense in bringing our switch to its present state of perfection. It is because of this quality that we are in a position to insure satisfaction and give an absolute guarantee with each and every switch which leaves our factory.

"Chelten" Switches pass through three most rigid inspections of our own, and one under the supervision of the Underwriters' Laboratories. The latter inspection enables us to place upon each switch the Underwriters' "Label of Approval."

The use of Flush Switches in narrow wall partitions and elsewhere has made a Shallow Switch necessary. With this in view the present "Chelten" Switch was designed. Our Switches will fit any Wall Box, and can be used with any standard Plate, but we strongly recommend the use of our own Boxes and Plates.

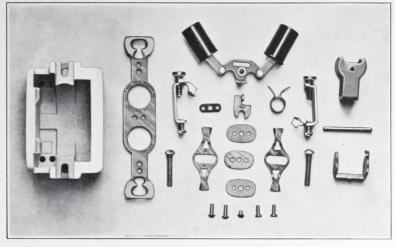

"Chelten" Switches are being shipped in large quantities and are giving entire satisfaction everywhere. They have been installed in many of the largest buildings and used by the large contractors who know where to buy material of the highest class. Our Switches are also strongly recommended to those contractors who are doing small house-wiring, and are forced, to meet competition, to buy the best material at fair prices. No order is too large to receive our attention, and none too small. We want you among our customers, and take this opportunity of requesting the pleasure of placing your name upon our mailing list. We are continually sending out catalogs and literature which will cost you nothing, and which are yours for the asking. Your name on our list will insure you of getting interesting information relative to Switches and our other Specialties, besides numerous wiring diagrams and data which should be in the hands of every jobber and contractor.

STOCK CARRIED

THROUGHOUT CANADA

SINGLE POLE SWITCH PARTS

SERVICE

Have been tested to operate over five hundred thousand makes and breaks. Exceedingly easy and noiseless push, with a smooth, positive locking action. Will break 15 amperes, 250 volts, or 200 per cent. overload, the Underwriters requiring but 50 per cent. overload. Are moisture-proof, for switches filled with water and allowed to stand show no signs of the insulation breaking down when tested for a short.

We use in the manufacture of the "Chelten" Switch the best material the market affords. The porcelain bases are made especially heavy, to avoid any danger of breakage in transportation. Blades are made of strong spring phosphor bronze. All steel parts are case-hardened, to prevent wear, and copper-plated, to prevent rust. All parts are uniform, being made by punches and dies, and assembled in jigs, insuring absolute uniformity. Binding screws are 8-32, with large heads. Switches are shallow, being only 178" deep.

MECHANISM

Our design is simple. We do not depend on a secondary spring for locking action. Terminals are held in the base by two screws, so that they cannot be turned out of alignment when wiring the switch in circuit. Terminals and brushes are formed from one piece of brass, giving a solid conductor. Our blades are designed to give a strong spring contact on the brush, and are provided with a wide flare, thus allowing them to easily center themselves on the brushes.

OUR PRICES

ARE INTERESTING

"Chelten" products are installed in some of the largest buildings throughout the country, and we wish to call your especial attention to the new Philadelphia Stock Exchange, recently erected, in which "Chelten" Switches and Receptacles were used exclusively.

WIRING DIAGRAM FOR PUSH BUTTON SWITCHES

3-Way Connections

4- Way Connections

Single pole and double pole Switches are used for controlling a circuit from one point, the former being used extensively in office and house work.

Three-way Switches control a group of lights from either one or two places, a switch being located at each place.

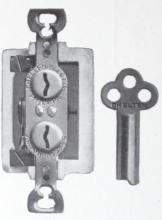

A Four-way Switch is used in conjunction with two Three-way Switches where a light or group of lights is to be controlled from three places. Where it is necessary to control lights from more than three places, additional Four-way Switches are put into the circuit.

SATISFACTION

"CHELTEN" SHALLOW PUSH BUTTON LOCK SWITCHES

CAT. No. 4004

Our Lock Switch is designed for use in apartments, stores, and other such places where the switch is exposed to the public, but must be controlled by a few. With these switches it is necessary to possess a key in order to operate the switch.

In manufacturing the "Chelten"
Lock Switch, we use the same superior
mechanism found in our standard switch.

BEST BY TEST

BUILT TO SATISFY

"CHELTEN" SWITCH PLATES

CAT. No. 5011

The Switch Plate is always most prominent on the wall, and is that part of the entire wiring installation which comes most forcibly to the attention of your customer. A poor plate with poorly beveled edges, and of inferior quality, will ruin what otherwise would be a first-class job; so, when ordering plates, specify "Chelten," and you will secure a brass plate which will give entire satisfaction. The finish on our plates not only shows up well, but is

lasting. We strongly recommend the use of brass plates in preference to the plated steel plates now being placed upon the market.

Our standard finishes are Brush Brass, Polished Brass, Oxidized Copper, and Nickel, for which there will be no extra charge. Unless otherwise specified, plates will always be furnished with a Brush Brass finish. Our plating department is prepared to finish plates in Bauer Barff, Bronze, Polished Bronze, Flemish Brass, Silver,

CAT. No. 5012

polished or dull, Gold; in fact, we are in a position to match samples of any hardware which might be furnished us.

Solid Plates can be made in any size from one-gang up. Stamped Plates are furnished only in one, two and three gangs.

For Combination Plates, see Pages 14 and 15.

NOTICE OUR WALL BOX

LARGEST JOBBERS

"CHELTEN" FLUSH RECEPTACLES AND INTERCHANGEABLE PLUGS

Chapman Type

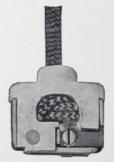

CAT. No. 5559

The "Chelten" Plug has been so designed that it is interchangeable with the Chapman type, but far stronger mechanically. We place a through hole in the center of the plug, which allows of sufficient space for a knot, upon which the strain falls when the plug is removed from the receptacle by means of the cord. Plugs are well finished and compact, and readily stand more than ordinary

usage. We are also prepared to furnish an unbreakable *Composition Plug* when purchased in connection with our Plate and Receptacle, at the same price as the Porcelain Plug.

We use long binding screws, which make this Plug very easy to wire.

Our Receptacles are shallow, of heavy porcelain, and will fit any standard Box.

CAT. No. 5561

Our Plates are well finished, edges are properly beveled, and doors work smoothly and fit well. These plates can be furnished in any of the finishes described in detail under "Switch Plates."

CHELTEN SWITCH

NONE SHALLOWER

"Chelten"
Specialties are being used very extensively throughout the western part of the United States and Canada. The American National Bank of San Diego, Cal., is an excellent illustration of one of the most recent installations.

THE UNDERWRITERS

"CHELTEN" FLUSH SCREW RECEPTACLES

For Edison Base Screw Plugs

3 Amperes, 250 Volts-National Electrical Code Standard

CAT. No. 6019

The "Chelten" Flush Screw Receptacle has been designed to take care of several defects found in a number of the Receptacles now upon the market. We have placed a solid brass washer at the base of our Receptacle, to prevent the shell from coming loose should the cord attachment be subjected to sudden strain. We have found by actual experience that this method is preferable to holding the shell in by means of simply one or two screws.

The Receptacle Plate is dust-proof when the door is closed, and, in fact, presents the appearance of a solid plate, the door fitting perfectly. The finish is similar to those listed on the previous page.

"CHELTEN" INDICATING HEATER RECEPTACLES

For Electric Heaters, Irons, Etc.

CAT. No. 30

The architect, in planning the modern house, as a rule, locates proper outlets for the several electric heaters. These are to be found in the bath-room, where curling irons and water heaters are used; in the laundry, where electric irons are used, and in the butler's pantry, where electric dish warmers, chafing dishes, and similar heaters are used.

The Underwriters require some means to indicate when the current is on, in order to guard against the possible danger of the heater setting fire to the surrounding woodwork.

For LIST PRICES, see Page 22

OUR GUARANTEE

WITH EVERY SPECIALTY

"CHELTEN" INDICATING HEATER RECEPTACLES For Electric Heaters, Irons, Etc.

CAT. No. 31

One of the most practical and neatest devices for this purpose is the "Chelten" Indicating Heater Receptacle. This Receptacle is mounted in a standard three-gang wall box. The face plate has a Receptacle at one end, a Push Button Switch at the other, and a one inch red cut glass bull's-eye in the center, back of which is mounted a small signal lamp, which tells at a glance whether the current is on or off.

We also manufacture an Indicating Heater Receptacle, which has, instead of the bull's-eye, a Sign Receptacle mounted on the plate, in order that an ordinary sixteen-candle power lamp may answer the purpose of the small enclosed lamp of our other type.

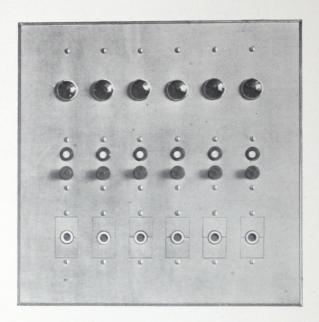

For LIST PRICES, see Page 22

ON OUR MERITS

"CHELTEN" INDICATING SWITCH RECEPTACLES For Cellar and Vault Lights—Distant Control of Motors

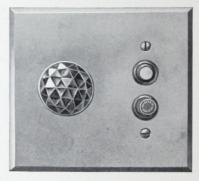

CAT. No. 40

This wiring specialty is designed for the control of cellar or vault lights, or the distant control of motors, vacuum cleaners, etc. The plate, consisting of a

1" red bull's-eye, together with outlets for switch buttons, is built to fit either a Two-gang or Tandem Box. In the rear of the bull's-eye has been placed a fourcandle power lamp, which shows from a distance whether the current is on or off.

When used with a Momentary Contact Switch, it makes an ideal installation for the direct control of motors such as to drive vacuum cleaners, etc., the light showing whether the motor is on or off, and reminding the operator to shut it off when through.

"CHELTEN" PRESSED STEEL WALL CASES

(Removable Side Type, for old or new work)

(PATENT APPLIED FOR)

Two and Three Inches Deep

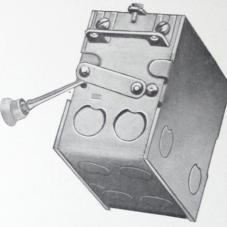

FIGURE 1

We wish to call your special attention to our newly designed spacer wall case, so constructed that there are no loose parts. Those screws and parts which are found loose in other boxes on the market, are replaced in this box by pins, held to the side of the box by means of pieces of flat spring metal. These boxes can be readily adjusted and ganged together with little effort, only half as long a time being required for this operation than is the case with the usual wall box.

These boxes are furnished in three-inch type for loom

and pipe, and two-inch type for loom, and are finished in black enamel.

Prices are the same as the loose screw type.

Ears, unless otherwise specified, are placed for new work.

In ganging our box together, it is merely necessary to remove the side of the

single gang box, by inserting a screw driver, pen knife, nail, or some other such article, under the springs, and raising the springs to the up position. (Figure 1).

With the springs in this position, the side readily pulls out. (Figure 2).

The spacer can be pushed into the place formerly occupied by the side. (Figure 3).

With the spacer in place, the side removed from the original box can be used in completing the gang box. (Figure 4).

If it is necessary to have a three, four, or larger gang box, it simply requires the use of extra spacers.

AMERICAN ADJUSTABLE GROUND CLAMP

For Power and Light Circuits

Approved by the Underwriters

PAT. JAN. 18, 1910

"THE CLAMP THAT CLAMPS"

In presenting our patented Adjustable Ground Clamps, we are filling a long-felt want for a Clamp that is easily and quickly adjusted to any size pipe, giving excellent contact and ground with little labor, and presenting the most finished appearance. We manufacture them in three sizes for pipes ranging in size from \frac{3}{8} inch to 3 inches; so it is not necessary to carry in stock a dozen different size Clamps to meet requirements. By means of simply a screw driver, it may be adjusted to the pipe.

It is made of pure copper, in two parts, interlocked, so that it makes an absolute and permanent contact when fastened to the pipe with screw and lock nut.

The lug for wire connection is notched and tinned, which allows for the free flow of solder. When the lug is pressed together, it forms a perfect, solid joint.

A request will bring a sample by return mail.

See our Ground Clamp, and be convinced.
